MANAGEMENT COMMENTARY

The NOVA Green Energy Fund-Sub-Fund 1 appreciated by +0.55% in February. In the first two months of this year, the appreciation reached +0.90 %. In terms of the fundamentals of individual energy sources, the fund has reached the expected level.

In January 2021, on which the February valuation is based, the exposure to the level of energy audit exceeded with a positive outlook for the first quarter. The Csabrendek photovoltaic power plant in Hungary is already included in the overall funded PV portfolio and its output is included in the summary commentary.

The biomass heating plant in Krnča is back to its expected level after technical problems with outages.

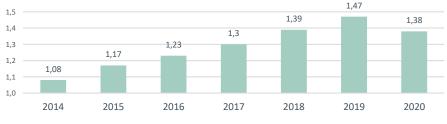

Overcompensation and solar tax at the PV plant in the Czech Republic were approved by the Senate and the Chamber of Deputies, approval of the implementing decree is expected every week, then it will be possible to set purchase prices of two power plants in the Czech Republic and the impact of these changes on asset valuation.

In order to reopen the fund to new investors, the manager analyzed in detail the possibilities of allocating part of the less liquid assets (see presentation on the fund's website) and decided to restructure the fund with the working name "Side-pocket", which seems to be the most appropriate solution its standard operation and the use of its very attractive "green" potential through the newly created Sub-Fund 2. A necessary technical precondition for the implementation of the above-mentioned "Side-pocket" plan is the suspension of the issuance and redemption of Sub-Fund 1's investment shares for 3 months. Preparatory work for the establishment of Sub-Fund 2 is currently underway.

Appreciation of the initial investment of EUR 1 million in the last 7 years
